Style Sheet

Last updated: 04/30/2025

**This is a general guide of what the website should be styled. Any redesigns must follow this unless there is a complete overhaul of the current designs (in which you must update this to match)

TO DO: As of Fall 2025

- Make everything match the styling / sizing

Overview

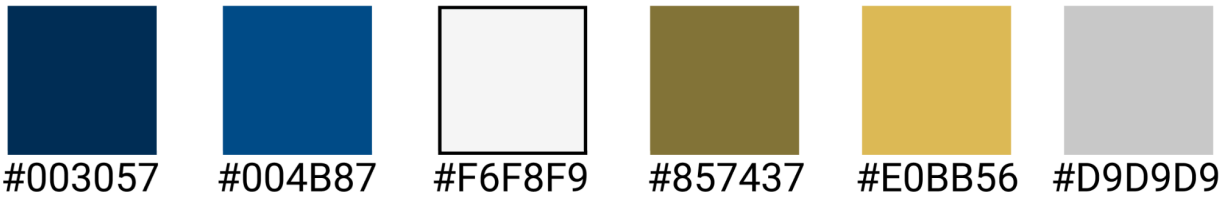

- Colors
- Font
- Components
- General CSS Styling
- How to Word Things
- Pictures / Assets

Colors

Color references (found on figma too):

A visual representation of the general proportion of each color on a page:

^ Colors from left to right (so you can copy/paste if need be):

- #003057
- #004B87
- #F6F8F9
- #857437
- #E0BB56
- #D9D9D9

Fonts

Style:

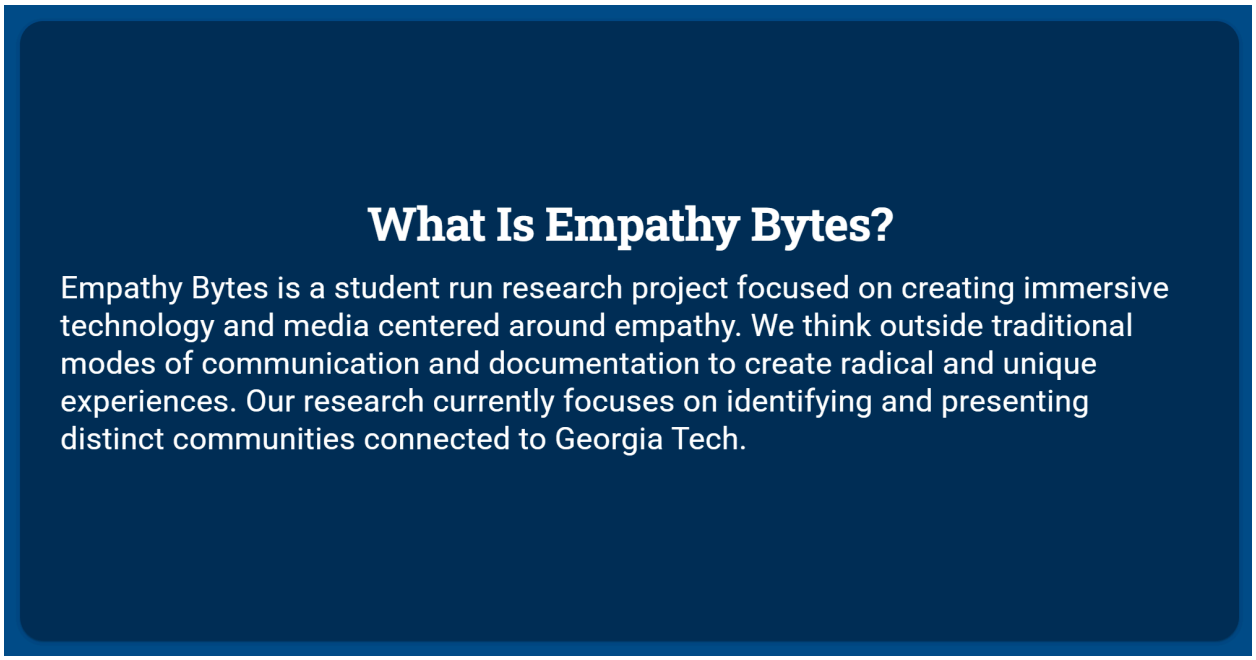

- **Header:** Bolded Roboto Slab (serif)
- **Subheading:** Roboto Slab (serif)
- **Body:** Roboto (sans serif)

Sizing:

1rem (normal text)

2rem (Header)

Components

Blocks of text should look something like this^

Corner radius for text boxes: 50

For all values, they may be dependent on how each box fits into the overall website visuals, but keep all values at a whole number.

1vw for border radius

left aligned

General CSS styling

These are the general css stylings to be followed unless otherwise stated or decided:

- LOOK UP HOW TO DO CSS plzzzz
- Use dynamic sizing
- If you make the decision please ask your team lead if it'd be s good choice to change these as they would be different from other parts of the website

Margins / Paddings:

- Padding (all sides): 2vw
- Margin (all sides): 5vw from other components

Layout

- Everything EXCEPT descriptive text should be centered
    - text-align, justify-content, vertical/horizontal-align, etc
- Try to use display flex
    - Look it up if you don't know what it is

Cards

- The card components are being used as sort of as a list to be clicked (like the ones on projects and experiences) should only be in 2 columns
- Width and height: 40vw
    - square unless description is overflowing but in that case, try shortening description or making changes to dynamic sizing
- Pic of what the card is about + SMALL description
    - rest of explanation should be in the page that describes what the project/experience/etc is about

How to Word Things

The style of writing we use for the website is from a formal/educational first person perspective (we, our, etc. except for I/me). This should be right-aligned in the text box

- For example the description of EB is:
    - “Empathy Bytes is a student run research project focused on creating immersive technology and media centered around empathy. We think outside traditional modes of communication and documentation to create radical and unique experiences. Our research currently focuses on identifying and presenting distinct communities connected to Georgia Tech.
- Think of it as if you are presenting our work (which is what the website is about anyways)
- Try to be concise but detailed; don’t word vomit
- Have people review your writing
- If you have trouble with writing, the Media Team can help you!
- There is some wording that still needs to be changed to fit this style on our website (so be on the lookout)

Pictures / Assets

For redesigns, be sure to obtain pictures / assets from the Media Team (or another sub team that may be involved in the redesign)

- This includes 3D assets (like showcasing VR), screenshots, videos, and maybe even graphics (that would be created by Media Team)
- Remember (and for the most part), these pictures/assets will need to be uploaded to Drupal and be queried by those working on backend

    - This means that if you are implementing / programming a page, make placeholders for these things if you aren't doing the backend

- These items may need to be updated as time passes so make sure they are easy to access or change!
